## ABOUT

At Hyper Island, I fell in love with coding, which I had never tried before. Now, just a few months later, I know how to use HTML, CSS and JavaScript, which I've used in many projects, both at and outside of Hyper.

I am looking for a job or internship as a junior Front end developer. My goals for the spring is to learn how to use JQuery, react, node.js and to animate with CSS.

Personality-wise, I am happy, calm, organized and good at working both independently and collaboratively. I love playing all sorts of computer, video and board games. I also love dogs.

## EDUCATION

### Digital Data Strategist

**Hyper Island** 2016 - 2018

An immersion into the digital media landscape and all the possibilities it brings. So far I've learned: to code with HTML, CSS, JavaScript, to use optimization tools such as Google analytics and HotJar, about Search Engine Marketing, for example AdWords and how to properly use SEO, and lastly how to present yourself and your work. During the spring I will also learn about Business optimiation.

Everything I have and will learn comes with a data perspective, and how you can use data to your advantage.

### Professional Language Program

**Stockholm University** 2012 - 2015

A bachelor's program which consists of courses in both Swedish and English linguistics, with a focus on multilingualism and business communication. I graduated with a bachelor's degree in English linguistics.

## WORK EXPERIENCE

### Front end developer

**Freelance** 2017

Aside from the projects I've made at Hyper, I am working on a website for my boyfriend and his colleague, who are planning to open their own concept bar.

### Freelance Journalist

**Oh My! and OP Communication** 2016 - now

Writing articles in both Swedish and English for different magazines and web pages. I have also translated between these languages.

## SKILLS - BEGINNER LEVEL

### HTML

### CSS

### JavaScript

### GitHub

### Google Analytics

### Photoshop

### AdWords

### HotJar
